

# PART 1 - PRESCHOOL LEVEL FIELD TRIP

## The Vision Care Hub Tour

We would like to invite you, all parents and students to **Vision Care Hub (VCH)**.

This Vision Care Hub program is an interactive learning initiative that seeks to go beyond the basic eye care habits education, and educate children about their eyes. They will learn about the eye's structures and respective functions, gain awareness about the changes that may occur and explore the various types of optical corrections used.

Teachers are welcome to have a **FREE** guided preview of The Vision Care Hub before deciding on whether or not to bring the students to the hub. **Prior booking is necessary.**

## HIGHLIGHTS OF THE VISION CARE HUB

### Vision assessment

Children will experience a more detailed vision assessment that will provide more insight on their visual status. This is important as uncorrected poor vision may impede a child's learning, especially when it occurs in their formative years.

### All about the eyes!

Learn about the various structures & functions of the eye, correct shape and size of the eye, difference between clear/blur/double vision. Parents may also learn more about their child's vision to better encourage good development.

### Vision Care Activities

Engage in activities/games where children learn about the various foods good for the eye and body. They will also learn eye exercises that they can do to relax their eyes. Children will reinforce their knowledge on good visual habits

**2 hours  
Guided  
Program**

**Designed for  
N2 to K2 children.  
Recommended 35-65  
kids/session.**

**\$13 per child &
